防爆要点

在进行电动机的结构设计时，充分地考虑了使用环境中的爆炸性混合物侵入电动机内部，因某种原因发生爆炸而不致引起电动机外部的爆炸性混合物爆炸的宗旨，从满足电动机外壳强度，组成外壳的各零部件间的隔爆接合面间隙或直径差、长度以及限制表面不许达到危险温度等关键条件着手来确定电动机的隔爆性能。

隔爆结构要素：组成电动机隔爆外壳的各零部件隔爆接合面及接线盒内部裸露导体之间，裸露导体与金属外壳之间的电气间隙、爬电距离：

电气间隙：10mm (380/660V)

爬电距离：16mm (380/660V)

电动机在规定的工作条件下额定运行时电动机允许表面温度不超过 130℃，电缆引入口温度不高于电缆的允许温度，以保证电缆运行可靠。

为了保证隔爆外壳的隔爆性能，连接用的紧固螺栓装有防松垫圈，以防止螺栓自行松脱，螺栓和不透螺孔紧固后，螺钉或螺栓尾部与螺孔的底部之间留有螺纹裕量，外壳上的不透螺孔周围的金属厚度不小螺纹外径的 1/3，但至少为 3mm。

引入电动机接线盒的电缆，在进线口处须用弹性密封圈密封，密封圈的邵尔氏硬度为 45~55°，密封圈尺寸下图表，其材料符合 GB3836.1 的 26.8，26.9 条规定的耐热耐寒试验要求。进入接线盒的电缆直径要与密封圈的孔径相符，密封圈上切有多个同心圆槽，可根据电缆直径调整密封圈孔径，当压紧接线盒斗后，应保证密封圈与电缆间和密封圈与接线盒斗间无间隙，密封圈能有效夹紧、密封电缆，否则将失去隔爆性能。

Flameproof Principle

During structure design, it has been taken into consideration that explosive mixture enters motor and leads to explosion inside but the explosive mixture outside the motor is isolated from explosion. Flameproof performance is guaranteed by its structure strength, flameproof joints between, diameter differences or length of frame parts, limited surface temperature, etc.

Flameproof elements: flameproof joints between frame parts and electric clearance and creepage distance between bare conductors and between conductors and metallic frame.

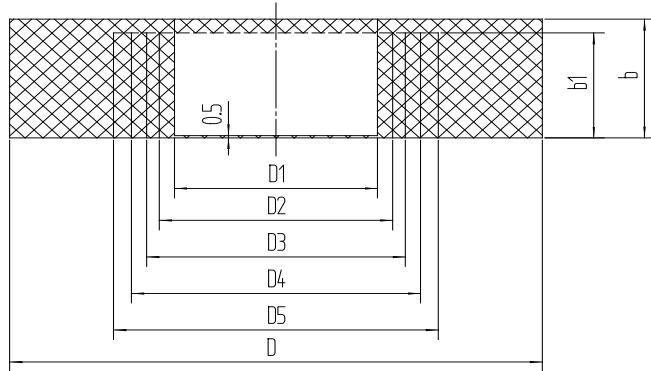

Electric clearance: 10mm (380/660V)

Creepage distance: 16mm (380/660V)

Under rated conditions, the surface temperature of motor should not be over 130 °C , and cable inlet temperature should not be higher than max. allowable temperature of cable.

In order to guarantee the flameproof performance of frame, its bolt fasteners should be locked by lock washer. After bolt is screwed down to non-through bolt hole, excessive threads shall be left between screw or bolt end and bolt hole bottom. Thickness of frame metal around bolt hole should not be less than 1/3 of full diameter of thread and min. thickness is 3mm.

Cable into junction box must be sealed with sealing ring (Shore Hardness 45-55°). Dimensions of sealing ring are shown in the following figure, and its material complies with Article 26.8 and 26.9 in GB3836.1. Cable diameter should match with that of sealing ring. Multiple concentric holes have been cut on sealing ring, therefore it is possible to adjust sealing ring diameter according to cable diameter. When cable gland is tightened, there should be no gap between sealing ring and cable and between sealing ring and cable gland. Sealing status of sealing ring will influence the flameproof performance.
